## **U8DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-19 and 22-23, drawn to a method for improving response of a plant to stress comprising a DNA molecule encoding a polypeptide having at least 90% identity to SEQ ID NO: 1, or a plant, seed, expression cassette or vector comprising said DNA molecule.

Group II, claim(s) 20-21, drawn to a method for improving response of a plant to stress comprising first DNA and second DNA, wherein first and second DNA are controlled by different signaling pathways.

The technical feature linking Groups I-II appears to be a nucleic acid sequence encoding a transcription factor protein involved in stress tolerance. However, Alexandrov et al. (EP1033405-A2, Published 6 September 2000; IDS) teach a DNA molecule encoding Myb transcription factor protein (SEQ ID NO: 67644) having 100% identity to instant SEQ ID NO: 1. The reference also teaches expression cassette, plant cell or plant, or a method of making transgenic plant comprising said DNA molecule. The property of stress tolerance would be inherent to the expression of said DNA molecule in Alexandrov et al. plant.

Therefore, the technical feature linking the inventions of Groups I-II does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

Accordingly, Groups I-II are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Applicants are reminded that different nucleotide sequences and amino acid sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute different inventive concepts.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
